

**There's only one place  
you'll find this kind  
of innovation.**

**LifeGuard 850**  
with Touch Control™

**American innovation is alive and well**

When the Leicher family started Life Line Emergency Vehicles in 1985, they were committed to two guiding principles: Innovation driven by real-world EMT experience and quality that delivered major cost benefits over the long haul.

Over the years, the industry has followed our lead, with Life Line features like double aluminum flooring, super strong "X-Frame" construction and quiet, 3-inch labyrinth style doors setting benchmarks in quality and performance.

**The legacy lives on**

LifeGuard 850 with Touch Control™ takes us into our next 25 years with a range of convenience and performance features you'd expect from an industry leader.

LifeGuard 850™ is a fully programmable system with a touch screen interface that allows complete control of the unit's electrical components from the easy-to-read front or rear screen.

LifeGuard 850™ features TST's Extend-A-Life Technology to ensure field-tested rugged performance in extended use. The complete system features full screen GPS with up to four camera monitoring as well as LED diagnostics with bypass control of all critical functions.

**It's another example of quality and durability that saves**

When it's time to replace vehicles in your fleet, we know you have options. At one end of the spectrum, there are vehicles that deliver a low initial price with high life cycle costs requiring frequent replacement. At the other end, there's Life Line, with a legacy of long-term functionality and low life cycle cost that defines value far beyond the life of any chassis or drive train.

**That's why we say, before you decide, it pays to look inside!**
